

## Self-adhesive metal foils

**This term describes products from the M-Tech<sup>®</sup>F range which have a self-adhesive tape on one side of the metal tape or of the metal blank.**

The adhesive layer is 0.06 mm thick and protected with a removable film.

### Variants

With the exception of the 0.01 mm-thick foils, all articles from M-Tech<sup>®</sup>F (Lamifol) are available in a self-adhesive design.

On request, other sheet materials can also be supplied with the self-adhesive tapes or made into parts.

### Field of application and handling

The blanks and foil tapes are flexible and easy to use: the packaging is identical to that of M-Tech<sup>®</sup>F Boxes or Flatpacks. Pull out, remove, cut off, stick on, done!
